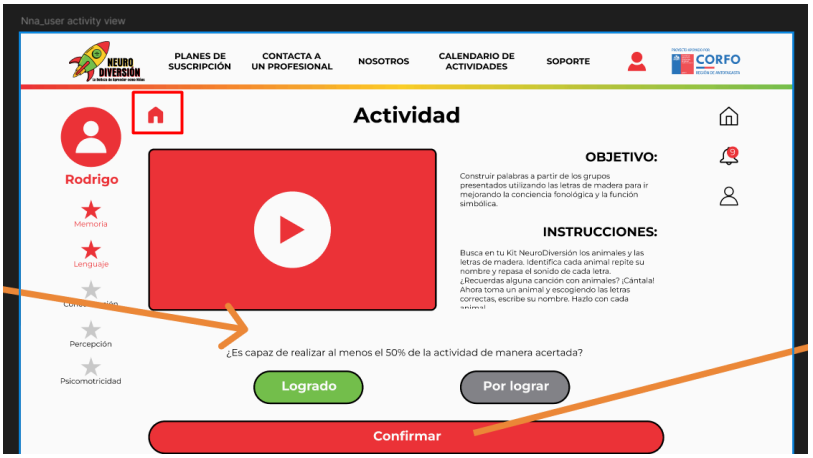
Feedback M1 and M2

1. **Position at the top of the entry guide section:**When completing a section and moving to the next, the page should be positioned from the top/home screen (This is correct in the mobile version, but not in the desktop version)

2. **Skip intermediate screen:**When logging in a user whose diagnosis is not yet complete, an interface appears for 1 second saying "No data". That shouldn't appear.

3. **Back button:** The "Back" button (with the house icon) should return to the student dashboard, as Figma indicates:

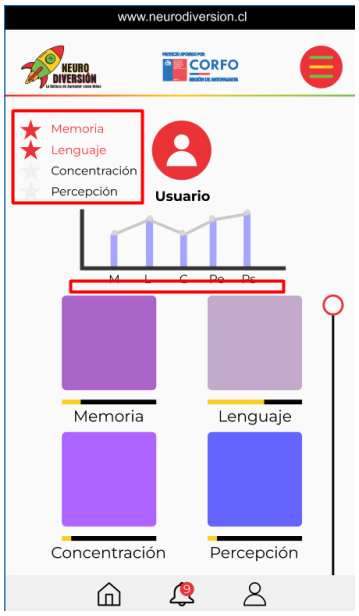
4. **"Home" icon in activity view:**The button should return to the student dashboard:



5. **Interface details:**

a. **Fix fixed user menu:**It overlaps with the header on notebook screens

b. **View of star indicators in mobile version:**They can be placed in either of the 2 red boxes.



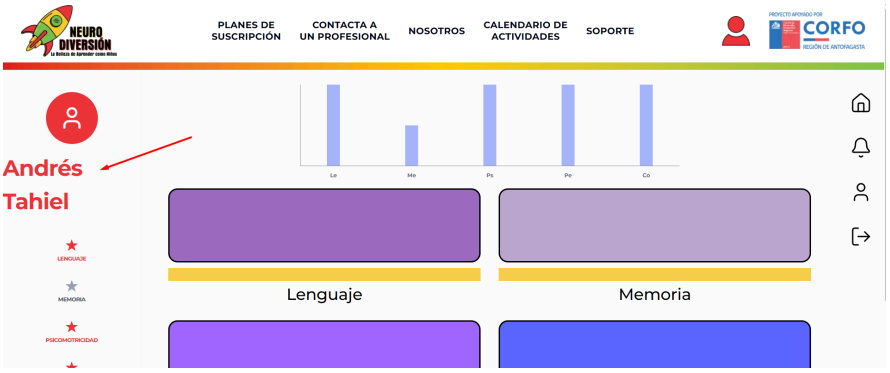
c. **"Home" return button in "Activity" view (Mobile version):** Please add.

d. **Correct the default color of the reply button in "Activity":**It should be gray in its normal state, and change to green only if it has been selected.

b. **Response buttons**: The activity must allow selecting one of the 2 buttons and marking it in green:

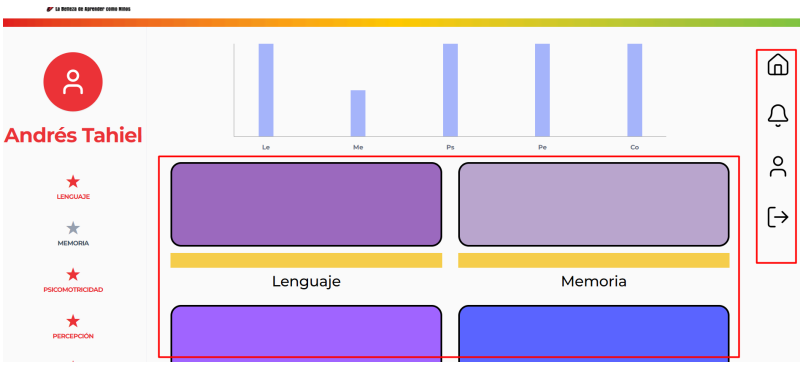
Observation: Load the button's state with 'is_success' (If it is not null)

e. **Correct the position of the student's name in their dashboard view:**This is how it looks on a 21.5" screen

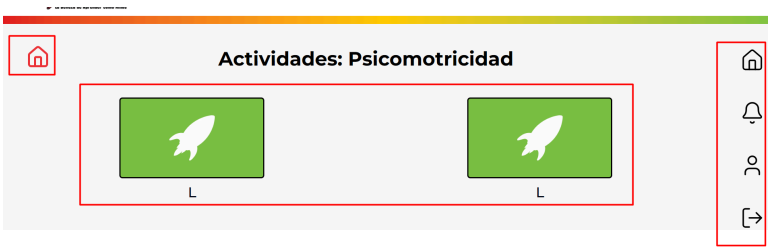


f. **Apply hover effect to selectable elements:**

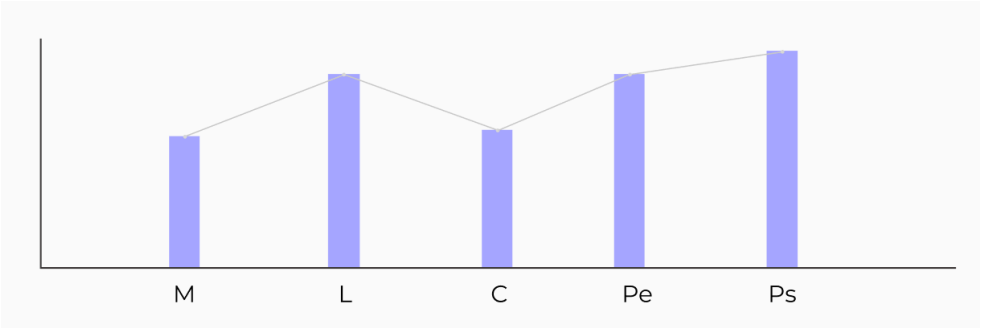
i. **Vista dashboard**



ii. **View list of activities**



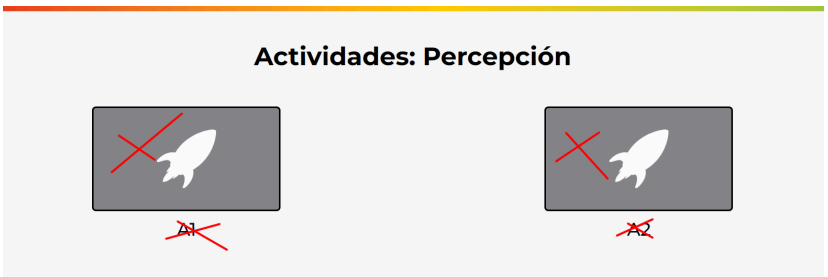
g. **Apply horizontal lines connecting the highest points of the top bar chart:**"This requirement is desirable by the client" (Confirm if you find it too complicated?)



h. **Color and write the letters correctly in each activity, according to the specs.**There should be no gray colors, only reds and greens, and the letters “L” and “PL”.

iii. **Output data:** Activities list:

Parameter	Data type	Description / UI logic
activity_id	Number	IUnique identifier for the activity. **Use**: Serves as a key for mapping in React and as a parameter to navigate to the activity details.
is_success	Boolean | Null	Indicates the completion status of the activity: • true: Completed: It must be colored green and the letter "L" displayed • false/null: Otherwise, red and the letters "PL"

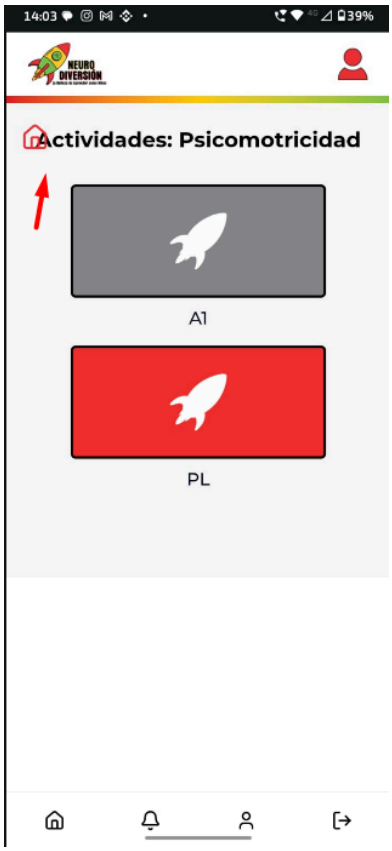


i. **Reduce the video length dimensions in the activity view:**It takes up a lot of space on notebook screens. Make right section higher:

i. View in notebook

ii. View in Figma

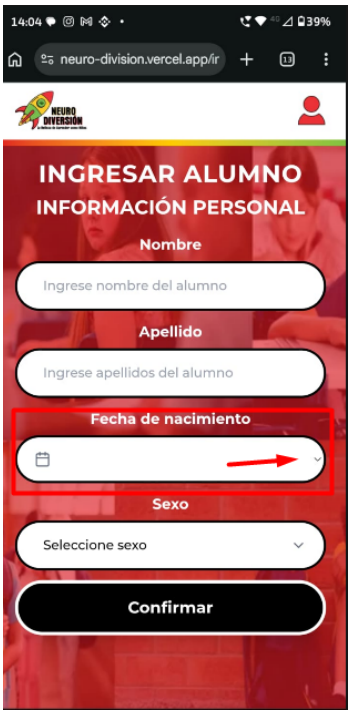
j. **Overlap in mobile view:**



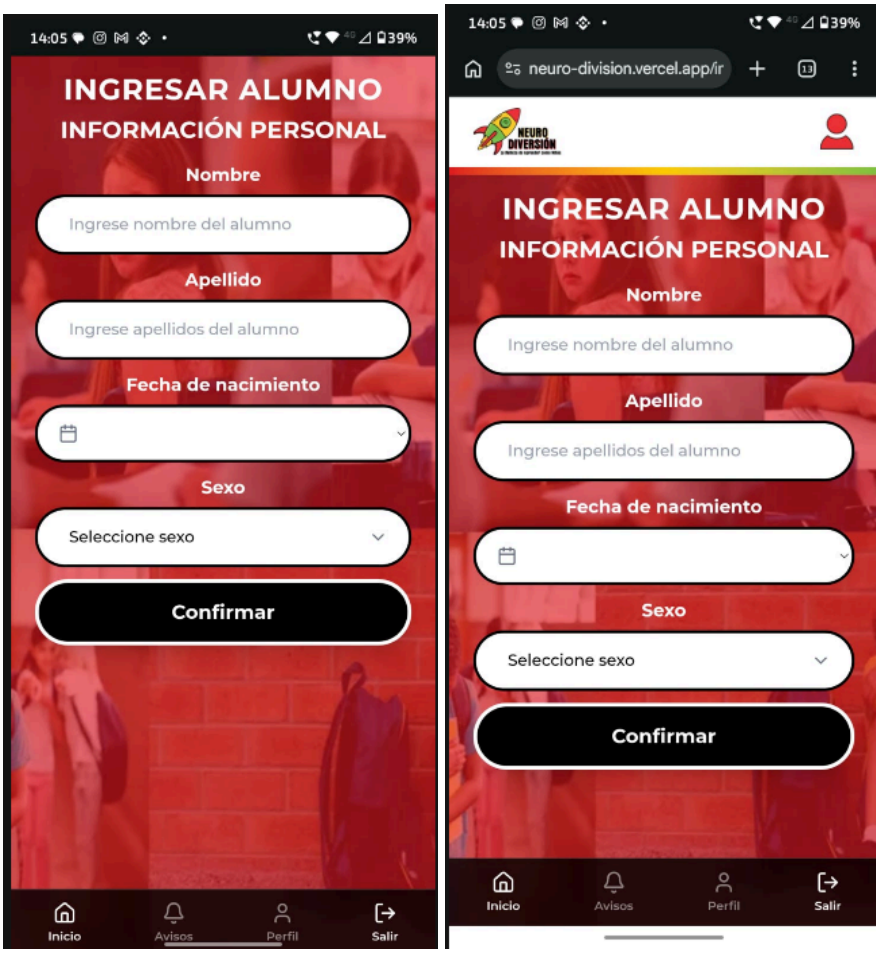
k. **Mobile birth date picker design:**

i. Correct the position and size of the drop-down arrow:

ii. **Also "It should only allow entering dates prior to the current date."**



I. **Fix strange background image movement (On mobile):**When you scroll down, the image enlarges slightly, and that shouldn't happen.



6. **Omissions:** I see you've omitted some interface elements, and I agree, such as the "Confirm" button in activity responses, or the fixed student menu on the left in the activity list and specific activity views. There's no problem with those simplifications.

7. **Important Bug**. After using the site for a while, the entire website crashed. I was unable to log in. The code probably has a loop, or a misuse of “useEffect”.
