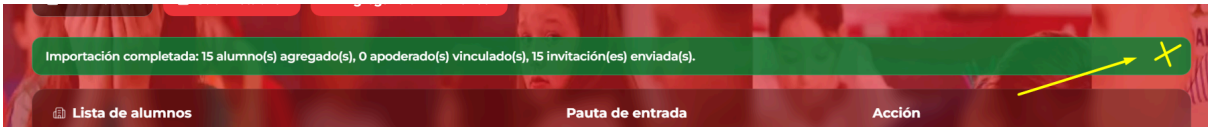
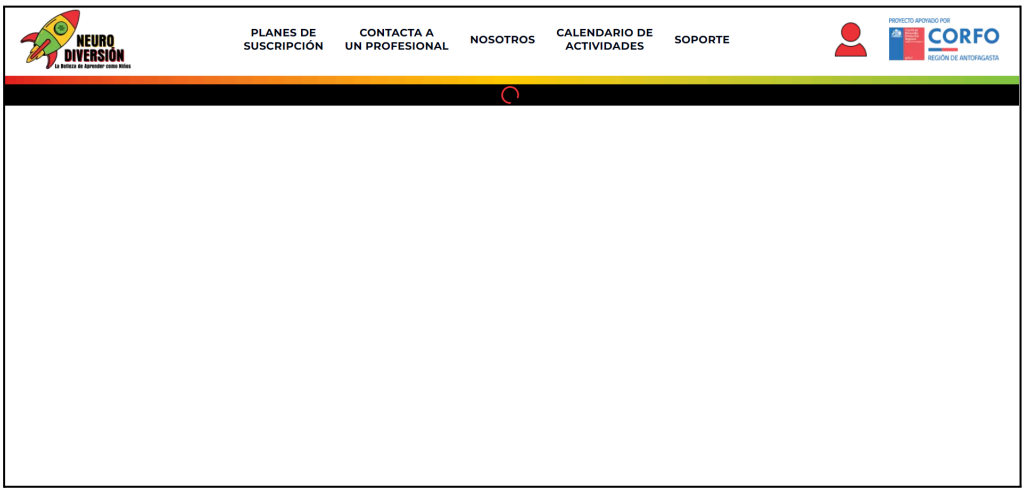
Feedback M3

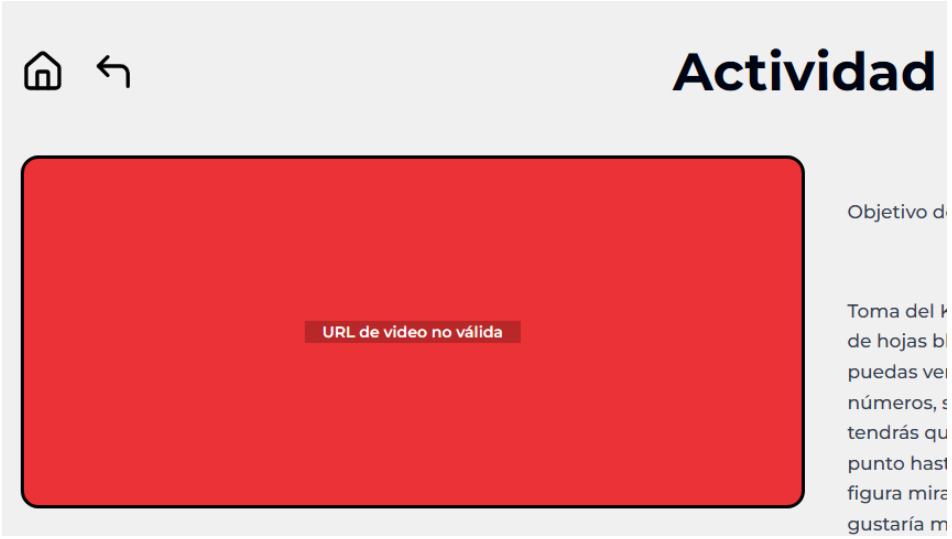
1. **Informative Window:** Add an 'X' button to be able to close the informative window



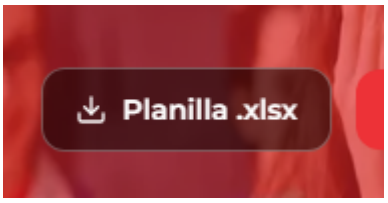
2. **Page loading:** Look for a more sober option for loading between pages. This is seen very often and looks bad:



3. **View video within activity**

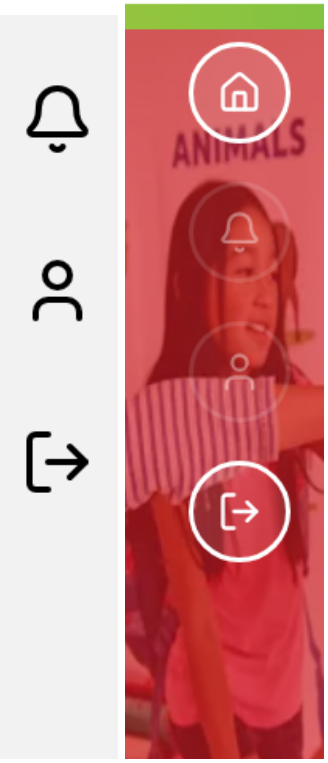


4. **Download the correct file template**



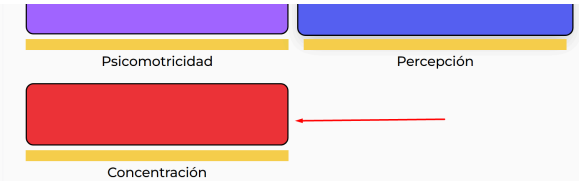
Feedback M3

5. **Seek greater consistency between the side menus.** They should be the same, same position, same size, the only difference would be inverted colors. **For simplicity, we could make it the same as the one on the left, meaning static on the page, and not fixed on the screen.**



6. **Strange space on the main page.**

7. **Please change the color of the last category to the code: #0000FF**.



Feedback M3

8. **Add new button blocking condition on dashboard_course:**

    a. Consider the variable **'can_add_student**' from the function '**get_course_dashboard(p_course_id)**'

    b. **If false, block:**

9. **Include video from /public on the front page.**

10. **Mobile adaptation corrections:**

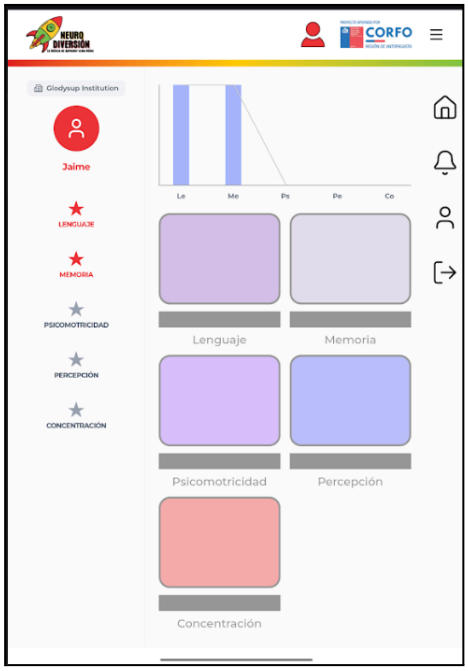
    a. **Adaptation in activity view:** This view corresponds to the vertical mode of a tablet.

    i. **Make the video position itself above the texts.** This way the video and texts would occupy the full width of the middle section.

    ii. **Slightly reduce the width and separation of the first column with the next section.** This way, align and give more space to the last column of the right side menu.

iii. **Strange white space at the bottom of the page:** Please avoid that blank space.

b. **The same as the previous point [10.a.ii](#):**



i. **Slightly decrease the width and separation of the first column with the next section.** This way, align and give more space to the last column of the right side menu.

In general: Since the Figma design is not that precise, please look for the greatest possible consistency between the elements, distances. For example, if you have doubts about what distance to apply, a good practice is to use numbers divisible by 4 or 8.
